

WebIT BPM

PEOPLE

Although BPM is a management tool, it's also a way of empowering people in your organization. Automation relieves employees of frustration and boring tasks, and a centralized dashboard provides a productive workspace.

PROCESS

Map your entire business process and automate sub processes and workflows. Provide for integration of existing and new applications both inside and outside your company. Connect to your clients and suppliers automatically. You can use methodologies and tools like lean and six sigma to improve your processes.

SYSTEM

WebIT BPM executes business processes written following the WS-BPEL standard. It integrates seamlessly with SOA and EDA implementations and talks to other applications through web services, sending and receiving messages, handling data manipulation and error recovery as described by your process definition.

- Orchestrate your assets!
- WebIT BPM is a process orchestration engine with built-in application integration capabilities.
- Your processes can be automated and existing applications integrated.
- To complement our software we also provide services like process modeling and application development.
- All processes can be administered via an online console, along with task lists, measurements and models.
- Grow with us. Identify your processes and let us help you get on your way to a managed future.

What is BPM?

BPM is a top down methodology designed to organize, manage and measure the organization based on its core processes.

Now with new technical improvements, BPM is where all the lofty goals and best strategies of business management is tied together. It's customer first. It's business focused. It empowers people in all corners of a business to be more successful. It brings people and systems together.

What does BPM do:

- Makes a process centric organization
- Aligns Business and IT
- Adaptive and flexible processes
- End-to-end process visibility and control
- Automation of standard, repeatable processes
- Continuous process improvement
- Role-focused composite applications

Why is BPM relevant for you?

- A growing number of leading companies have begun to believe that a corporate wide focus on processes provides a superior way of managing the company.
- Make process more efficient to save money. Typically during bad times you automate and reduce waste.
- Redesign processes to make you more competitive, to offer new services or to get into new lines of business.
- Add a competitive advantage by incorporating new technology.
- In mergers and acquisitions companies have to integrate processes used at the two different organizations.
- Conform to government regulations and certifications like ISO and CMMI.
- Streamline business operations with process enabled partners, clients and suppliers.

Web Integration Technology Sdn Bhd

Being an MSC status company we were founded in 2005 as a business software development company. Upon successfully developing online CRM and Project management software we realized the future lies in a process enabled environment and decided to focus on integration of our products using a BPM solution.

Through our new product for application integration and business process management, WebIT BPM, we now delivers tailor made solutions to suit companies ready to change. Our philosophy is to start small but think big and introduce process centric thinking one step at a time.

There are so many companies out there that should start today to develop a process centric organization to keep up with future competition. We want to be there and offer a soft way in. Our focus will be on profitable changes and education. One approach is to do core business development projects for our clients and introduce support for processes as part of the solution. This way we can easily convey the benefits of working in a process controlled environment within the budget and timeframe of existing projects.

In these cases, BPM offers a faster time to a solution and also serves as a pilot to a first experience with BPM.

Why WebIT?

- We are committed to long term relations adding trust and stability to our clients.
- All our products are built on a reliable infrastructure based on thoroughly tested open source components.
- Approachable and easy to reach for support and maintenance. We are local entrepreneurs, our programmers are just around the corner.
- We offer flexible solutions. Think big but start small. All our software have extremely flexible licensing policies.
- We strive to adopt a humble approach. We are aware that you know your business best. We are only here to help you maximize your potential.
- By being creative and innovative we help the client discover new revenue streams.
- No need to acquire new skills or knowledge before you start. We will work through your processes with you and help you learn as you implement.
- We embrace new technology and maintains an agile and streamlined organization to assure short turnaround time.

Other products available, either as standalone solutions, or integrated into a complete process centric environment on top of our business process engine.

ORIGO

Online collaboration and project management tools with built in CRM and back office functionality. Keep all your client details and projects at hand at all time. Make sure all hours are accounted for by intuitive and easy to use time tracking.

ONP and OKP

The enterprise portal is your company's face to the world. All your customers, employees and suppliers should meet at this common workplace for sharing of information and trading.

OKP is a web based Knowledge Management System with Topic Map Technology. The way Topic Map connects all your content with associations makes for a brain like way to store and collect information.
